

***TransIT*[®]-Insect Transfection Reagent**

Offers distinct advantages over other reagents such as:

- **Exceptional DNA Delivery** - Validated in Sf9, High Five™ and S2 cells
- **High Titers** - Ideal for recombinant baculovirus production using the *flashBAC*™ expression system
- **Serum Compatible** - Non-liposomal, animal-origin free formulation
- **Better Value** - Low reagent amounts required per transfection

Efficient Delivery of Baculovirus Genomic DNA.

Sf9 cells were co-transfected with 0.5 µg of ProGreen™ baculovirus genomic vector DNA (AB Vector) encoding green-fluorescent protein (GFP) and 0.1 µg of pVL1393 transfer vector (AB Vector) using *TransIT*[®]-Insect Transfection Reagent at the reagent-to-total DNA ratio of 3:1 (µl:µg).

Superior Gene Expression Compared to Liposomal Formulations

TransIT[®]-Insect Outperforms Competitor Transfection Reagents. Insect cell lines Sf9, High Five[™], S2 were transfected with a luciferase expression plasmid driven by an hr5 enhancer/IE1 promoter using the designated reagent at the indicated reagent-to-DNA ratios. Transfections were performed in 96-well plates using 0.1 µg of plasmid DNA. Luciferase expression was measured at 48 hours post-transfection using a standard assay. Visit mirusbio.com/insect for full experimental details.

PRODUCT	PRODUCT NO.	QUANTITY
TransIT [®] -Insect Transfection Reagent	MIR 6104	0.4 ml
	MIR 6100	1 ml
	MIR 6105	5 x 1 ml
	MIR 6106	10 x 1 ml
flashBAC [™] Baculovirus Expression System	MIR 6115	5 RXN
	MIR 6120	24 RXN
flashBAC [™] ULTRA Baculovirus Expression System	MIR 6135	5 RXN
	MIR 6140	24 RXN
pOET1 Transfer Plasmid	MIR 6150	20 µl (500 ng/µl)
pOET1C_6xHis Transfer Plasmid	MIR 6151	20 µl (500 ng/µl)
pOET6 BacMam Transfer Plasmid	MIR 6152	20 µl (500 ng/µl)
