Echelon Biosciences PIP Mass Assays

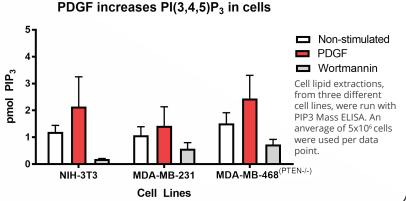

Phosphatidylinositol phosphates (PIPs) are more than just membrane components. They are vital signaling molecules within the cell that participate in a variety of biological processes ranging from membrane trafficking, inflammation, and cell death. Additionally, PIP signaling has also emerged as an important target in cancer therapy, hence there is a need to better understand the involvement of PIPs in cellular processes.

Echelon Biosciences' **PIP Mass Assays** offer researchers a comprehensive selection of ELISA based assays for the measurment of PIP levels from biological samples.

PIP3 Mass Assay

The production of PIP3 via PI3-K is important in multiple cell signaling pathways. Typical experiments to measure this activity involve the use of radioactive labeling followed by chromatography. The assay plate method developed by **Echelon Biosciences** allows the user to determine PI3-K activity by measuring the amount of PIP3 extracted from cells by means of standard ELISA format, eliminating the need for radioactivity, and thin layer chromatography.
