

Cloning Vector pACYC184

Product Information Sheet
V32402

SUMMARY

shipped at RT; store at 4 °C

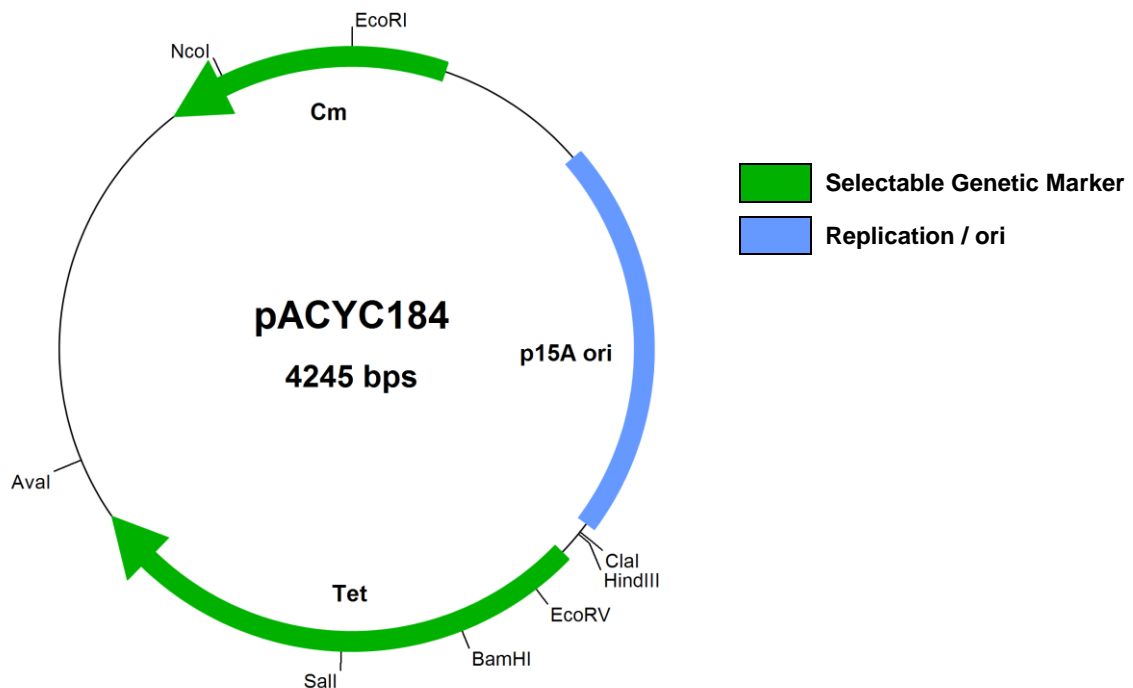

For research use only

Product

pACYC184 cloning vector for replication in *E. coli*

Description

pACYC184 can be used together with, or as an alternative multipurpose vector to, pBR322. The origin of replication of pACYC184 is derived from the miniplasmid p15A1, whereas that of pBR322 and its derivatives is from pColE. These origins are compatible and pACYC184 and pBR322 can therefore co-exist within the same cell. This allows two recombinant plasmids to be maintained and expressed simultaneously.

Cloning Vector pACYC184

Product Information Sheet
V32402

Quality Warranty

DNA concentration and purity was checked by UV spectrophotometry. All restriction sites specified in the vector map were checked by digestion and subsequent analysis on an agarose gel.

Order Information, Shipping and Storage

Order#	Product	Amount
V32402	pACYC184, lyophilized DNA	25 µg
shipped at room temperature (RT); store at 4 °C. Once the DNA has been dissolved in sterile water or buffer we recommend storage at -20 °C.
